

EXCEL ANALYSIS REPORT

E-Commerce Sales Dataset — Day 2

7-Day Data Analyst Portfolio Roadmap — Full Step-by-Step Documentation

By : Alya Shandy

1. Introduction

This report documents the data analysis process applied to the e-commerce sales dataset that was cleaned on Day 1 (cleaned_sales_data.xlsx, 3,933 rows). The analysis was carried out entirely in Microsoft Excel using Pivot Tables, formulas (SUMIFS, COUNTIFS, IF, INDEX/MATCH), and PivotCharts, following the Day 2 checklist in the 7-day Data Analyst portfolio roadmap.

Unlike the Day 1 report, this one is written as a step-by-step tutorial — each section explains HOW to do something in Excel (which menu to click, which field to drag, which formula to type), not just the end result. The goal is so the process can be repeated or taught to someone else without having to recall everything from scratch.

Working file: Sales_Analysis.xlsx — created via Save As from cleaned_sales_data.xlsx, with additional sheets: pivot_tabels, Summary, Charts, and Insights.

2. Executive Summary

Table 1 summarizes the main KPIs from the analysis.

Metric	Value
Total Revenue (Completed)	\$252,227.72
Total Orders (Completed)	3,220
Average Order Value	\$78.33
Total Revenue (All Status)	\$306,842.22
% Revenue at Risk	17.8%

Table 1. Key KPIs from the Sales Performance Summary

3. Analysis Steps (Tutorial)

3.1 Creating the First Pivot Table

All the Top Products, Top Categories, Monthly Revenue, Regional Performance, and Customer Segments analyses are built from Pivot Tables that reference the data Table in the cleaned_sales_data sheet (named Table4).

How to build it:

1. Click any cell inside the data Table (cleaned_sales_data sheet).
2. Insert > PivotTable. Excel automatically detects the Table/Range (Table4).

3. Choose New Worksheet (or Existing Worksheet if placing it in the already-created pivot_tables sheet). Click OK.

Figure 1. The Create PivotTable dialog — data source Table4, placed in a new worksheet

Figure 2. An empty Pivot Table before any fields are added — the field list appears in the right-hand panel

4. Drag the desired fields into the Rows and Values areas in the PivotTable Fields panel on the right. This combination of fields is what differentiates each pivot table (explained section by section below).

3.2 Top 10 Products by Revenue

1. Drag product_name into Rows, revenue into Values (automatically becomes Sum of revenue).

	A	B
1	Row Labels	Sum of revenue
2	Business Strategy Book	3326.066429
3	Cookbook	3695.323578

Figure 3. All products with their Sum of revenue, before filtering to Top 10

2. Right-click any revenue figure → Sort → Sort Largest to Smallest.

3. Click the filter dropdown on Row Labels → Value Filters → Top 10...

Figure 4. The Value Filters > Top 10 menu on the Row Labels dropdown

4. Make sure the filter is set to “Top 10 Items” based on Sum of revenue, then click OK.

Top 10 Products by Revenue	
Row Labels	Sum of revenue
Webcam	11684.87
Smartphone Case	11621.86
Power Bank	10494.45
Camping Tent	10146.63
USB-C Cable	9894.29
Non-Stick Pan	9605.93
Laptop Stand	9589.98
Resistance Band	9483.80
Bluetooth Speaker	9186.68
LED Desk Lamp	9069.24
Grand Total	100777.73

Figure 5. Final result: Top 10 Products by Revenue, led by Webcam (\$11,684.87)

3.3 Top Categories

The method is the same as Top Products, but the Rows field is swapped for category, and there's no need for a Top 10 filter since there are only 7 categories in total.

1. Create a new pivot table: category into Rows, revenue into Values.
2. Sort Largest to Smallest.

Top Categories	
Row Labels	Sum of revenue
Electronics	79289.48
Home & Kitchen	61310.53
Sports & Outdoors	48657.00
Clothing	43285.06
Toys	31240.43
Beauty	23901.76
Books	19157.95
Grand Total	306842.22

Figure 6. Top Categories — Electronics leads with \$79,289.48

3.4 Monthly Revenue Trend & Regional Performance

Monthly Revenue Trend

1. Create a new pivot table: order_date into Rows, revenue into Values.
2. Excel automatically offers to group the dates (a Group dialog) as soon as order_date is dragged into Rows. Check only Months and Years (uncheck Quarters if it appears), so the result is Year → Month directly, without a Quarter layer in between.

Regional Performance

1. Create a new pivot table: region into Rows. Drag revenue into Values (Sum), then drag order_id into Values a second time and change its Value Field Settings to Count — giving 2 metrics at once: total revenue and order count per region.

Top 10 Products by Revenue		Top Categories	
Row Labels	Sum of revenue	Row Labels	Sum of revenue

Figure 8. Regional Performance with 2 columns (Sum of revenue and Count of order_id)

An insight that jumps out right away: the East region dominates drastically — \$229,821 of \$306,842 total revenue (75%), and 2,926 of 3,933 orders (74%). The West region contributes just \$3,367 (1%).

3.5 Customer Segments

Unlike the previous 4 pivot tables, Customer Segments needs 2 helper columns in the data sheet first before its pivot table can be built — because “segment” isn’t a column available directly in the raw data.

Step 1 — Count transactions per customer (COUNTIFS)

Create a new column customer_order_count in the cleaned_sales_data sheet:

```
=COUNTIFS($C$2:$C$3934,[@customer_id])
```

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
	order_id	order_date	customer_id	customer_name	region	category	product_name	quantity	unit_price	order_status	payment_method	revenue	customer_order_count

Figure 12. The completed `customer_segment` column, filtered to show New Customer only as verification

Step 3 — Build the Customer Segments Pivot Table

1. Create a new pivot table: `customer_segment` into Rows, revenue into Values (Sum), and `order_id` into Values again (Count).

Customer Segments		
Row Labels	Sum of revenue	Count of Orders
New Customer	3427.88	48
Repeat Customer	303414.34	3885
Grand Total	306842.22	3933

Figure 11. Customer Segments result — Repeat Customers dominate at 3,885 of 3,933 orders (98.8%)

3.6 Overview: All Pivot Tables

All five pivot tables (Top Products, Top Categories, Monthly Revenue Trend, Regional Performance, Customer Segments) are arranged side by side in the pivot_labels sheet so they read as one compact mini-dashboard.

Top 10 Products by Revenue		Top Categories	
Row Labels	Sum of revenue	Row Labels	Sum of revenue
Webcam	11684.87	Electronics	79289.48
Smartphone Case	11621.86	Home & Kitchen	61310.53
Power Bank	10494.45	Sports & Outdoors	48657.00
Camping Tent	10146.63	Clothing	43285.06
USB-C Cable	9894.29	Toys	31240.43
Non-Stick Pan	9605.93	Beauty	23901.76
Laptop Stand	9589.98	Books	19157.95
Resistance Bands	9483.80	Grand Total	306842.22
Bluetooth Speaker	9186.68		
LED Desk Lamp	9069.24		
Grand Total	100777.73		
Monthly Revenue Trend		Regional Performance	
Row Labels	Sum of revenue	Row Labels	Sum of revenue
2023	157565.78	East	229821.11
Jan	12576.92	Midwest	59797.74
Feb	13438.69	South	13856.29
Mar	16241.61	West	3367.08
Apr	12727.19	Grand Total	306842.22
May	14949.47		
Jun	9447.58		
Jul	12913.82		
Aug	14167.22		
Sep	14114.10		
Oct	13900.84		
Nov	12892.05		
Dec	10196.29		
2024	149276.44		
Jan	11348.85		
Feb	11352.15		
Mar	12558.72		
Apr	10886.72		
May	14431.93		
Jun	10747.39		
Jul	12179.76		
Aug	13702.97		
Sep	10987.13		
Oct	13284.38		
Nov	13760.26		
Dec	14036.19		
Grand Total	306842.22		

Figure 13. The final layout of all five pivot tables in the pivot_labels sheet

3.7 Sales Performance Summary (SUMIFS, COUNTIF)

The main KPIs are calculated in the Summary sheet rather than simply pulled from a pivot table's Grand Total — so they can be filtered specifically to Completed orders (revenue that has actually been realized, excluding Cancelled/Returned/Pending).

Total Revenue (Completed):
`=SUMIFS(Table4[revenue],Table4[order_status],"Completed")`

Total Orders (Completed):
`=COUNTIF(Table4[order_status],"Completed")`

Average Order Value:
`=D3/D4`

Total Revenue (All Status):
`=SUM(Table4[revenue])`

% Revenue at Risk:
 $=1 - (\$D\$3 / \$D\$7)$

Sales Performance Summary	
Total Revenue (Completed)	\$252,227.72
Total Orders (Completed)	3220
Average Order Value	\$78.33
Total Revenue (All Status)	\$306,842.22
% Revenue at Risk	17.80%

Figure 14. Sales Performance Summary — Total Revenue Completed \$252,227.72, AOV \$78.33, Revenue at Risk 17.8%

17.8% revenue “at risk” is a strong insight — nearly 1 in every 5 potential dollars is lost to cancelled, returned, or pending orders.

3.8 Customer Lookup Tool (XLOOKUP vs INDEX/MATCH)

The original plan was to use XLOOKUP, but the Excel version being used turned out not to support it (only available in Excel 365 / Excel 2021 and later — if the formula suggestion box only shows XIRR/XNPV/XOR, that’s a sign XLOOKUP isn’t available). INDEX + MATCH was used instead, which is functionally equivalent — finding a value based on an exact match.

If your Excel supports XLOOKUP (Microsoft 365 / Excel 2021+)

It’s more concise to use — a single function, no need to combine it with another one:

1. Type =XLOOKUP(then click cell D12 (the lookup value, i.e. the customer_id typed by the user).
2. Comma, then click-drag/select the entire customer_id column in the Table (Table4[customer_id]) — this is the “lookup_array”, where XLOOKUP searches for a match.
3. Comma, then click-drag/select the column whose value you want returned, e.g. customer_name (Table4[customer_name]) — this is the “return_array”.
4. Close the parenthesis, Enter.

```
=XLOOKUP(D12,Table4[customer_id],Table4[customer_name])
```

Compare this with the region, segment, and total orders versions — the formula pattern is identical, just swap the return_array:

```
Region:
=XLOOKUP(D12,Table4[customer_id],Table4[region])

Segment:
=XLOOKUP(D12,Table4[customer_id],Table4[customer_segment])

Total Orders:
=XLOOKUP(D12,Table4[customer_id],Table4[customer_order_count])
```

XLOOKUP defaults to an exact match (no extra argument needed like the 0 in MATCH), and can search leftward or rightward across a table — more flexible than classic VLOOKUP.

The version actually used in this file: INDEX + MATCH

Since XLOOKUP wasn’t available, INDEX + MATCH was used instead, giving an identical result:

```
=INDEX(Table4[customer_name],MATCH($D$12,Table4[customer_id],0))
```

How to read the formula: MATCH finds the ROW POSITION where customer_id equals D12, then INDEX pulls the customer_name value at that row position. The 0 at the end of MATCH is mandatory — it means “find an EXACT match”, not an approximate one. Without it, the lookup result could be wrong since customer_id isn’t sorted.

Sales Performance Summary	
Total Revenue (Completed)	\$252,227.72
Total Orders (Completed)	3220
Average Order Value	\$78.33
Total Revenue (All Status)	\$306,842.22
% Revenue at Risk	17.80%
Customer Lookup Tool	
Enter Customer ID	CUST1138
Customer Name	Fajar Anderson

Figure 15. Customer Lookup Tool — enter a customer_id (CUST1138), the customer’s name is displayed automatically (Fajar Anderson)

3.9 Charts (PivotChart)

Four charts were built directly from the pivot tables using PivotChart (not a regular Chart), so they update automatically whenever the underlying pivot table data changes.

1. Click inside the source pivot table → Insert → PivotChart → choose a chart type (Line for time trends, Bar for rankings, Pie for proportions).
2. For the Regional Performance chart, which combines 2 metrics on different scales (revenue and order count), a Combo Chart was used: revenue as a Column on the primary axis, Count of order_id as a Line on the Secondary Axis — so both are proportionally visible, with neither hidden by the other’s scale.
3. Field Buttons (the filter dropdowns that automatically attach to a chart’s corner) were hidden via PivotChart Analyze > Field Buttons > Hide All, for a cleaner look in the report.

26	Day 2	Excel Analysis	Tulis 5-10 business insights	Excel	
27	Day 2	Excel Analysis	Simpan sebagai Sales_Analysis.xlsx	Excel	

Figure 16. Day 2 checklist at the stage where the basic formulas (SUMIFS, COUNTIFS, IF) are done, with Charts and Insights still to follow

4. Business Insights

The eight insights below were drawn from all the figures and patterns found throughout the analysis above.

1. Extreme Dependence on the East Region

The East region accounts for 75% of total revenue (\$229,821 of \$306,842) and 74% of total orders (2,926 of 3,933), while West contributes just 1% (\$3,367, 41 orders). This extreme imbalance shows the business is heavily reliant on a single region — a major risk if East's performance declines.

2. 17.8% of Revenue Is at Risk of Not Being Realized

Of the \$306,842 gross revenue, only \$252,228 (82.2%) comes from orders with a Completed status. The remaining 17.8% (\$54,614) comes from Cancelled, Returned, or Pending orders — revenue that isn't guaranteed to actually convert into cash.

3. Customer Base Dominated by Repeat Customers, Weak New Acquisition

98.8% of orders (3,885 of 3,933) come from Repeat Customers, with only 48 orders from New Customers. This signals strong customer retention, but on the flip side points to very weak new-customer acquisition that needs to be addressed.

4. Electronics Is the Dominant Category and Product Driver

Electronics is the highest-revenue category (\$79,289, 26% of the total), followed by Home & Kitchen (\$61,311). Three of the top five best-selling products (Webcam, Smartphone Case, Power Bank) also come from Electronics — this category is the main sales driver.

5. Books Is the Weakest-Performing Category

Books has the lowest revenue of any category (\$19,158), less than a quarter of Electronics' revenue. This category could be worth re-evaluating in terms of product range or promotional strategy.

6. No Consistent Seasonal Pattern

Monthly revenue fluctuates with no clear seasonal pattern — peaking in March 2023 (\$16,242), then dropping to its lowest point in June 2023 (\$9,448). This volatility suggests revenue is driven more by random or operational factors than by seasonality.

7. Annual Revenue Slightly Declined, Not Grew

Total revenue dipped slightly from \$157,566 (2023) to \$149,276 (2024), a year-over-year decrease of about 5.3%. Small as it is, this is still a negative trend worth monitoring, not growth.

8. AOV Is Relatively Low, Suggesting a Bundling/Cross-Sell Opportunity

Average Order Value is just \$78.33 across 3,220 Completed orders, consistent with a quantity pattern where most orders are just 1 unit. There's an opportunity to raise AOV through bundling or cross-selling complementary products.

5. Day 2 Checklist Summary

Task	Status	Notes
Calculate Total Revenue	Done	SUMIFS, filtered by order_status = Completed
Calculate Total Orders	Done	COUNTIF, filtered by order_status = Completed
Calculate Average Order Value	Done	Total Revenue ÷ Total Orders
Find Top Products	Done	Pivot Table + Top 10 filter
Find Top Categories	Done	Pivot Table, 7 categories
Build Monthly Revenue	Done	Pivot Table, grouped by Year + Month
Build Regional Performance	Done	Pivot Table + Secondary Axis chart
Build Customer Segments	Done	Helper columns via COUNTIFS + IF, then a Pivot Table
Use Pivot Table	Done	5 pivot tables used in total
Use XLOOKUP / INDEX-MATCH	Done	Substituted with INDEX/MATCH — the Excel version did not support XLOOKUP
Use SUMIFS	Done	Total Revenue (Completed)
Use COUNTIFS	Done	customer_order_count
Use IF	Done	customer_segment
Build charts	Done	4 PivotCharts in the Charts sheet
Write 5-10 business insights	Done	8 insights in the Insights sheet
Save as Sales_Analysis.xlsx	Done	3,933 clean data rows

Table 2. Status of every Day 2 Excel Analysis task

6. Conclusion

The Day 2 analysis produced Sales_Analysis.xlsx, containing 5 pivot tables, 4 interactive charts, a KPI summary built with SUMIFS/COUNTIF, a Customer Lookup Tool built with INDEX/MATCH, and 8 business insights backed by concrete figures. The entire process was built on top of the clean 3,933-row dataset from Day 1, so the figures reported here stay consistent with the earlier stages.

The most significant findings: extreme dependence on the East region (75% of revenue), a potential 17.8% revenue loss from non-Completed orders, and very weak new-customer acquisition (only 1.2% of total orders). These three points are strong candidates for deeper discussion in Day 6 (Business Case Study).

This Sales_Analysis.xlsx file becomes the input for Day 3 (SQL queries), Day 4 (Python EDA), and Day 5 (Tableau dashboard) — in particular, the KPI figures and insights above will be used as a cross-check/validation reference at those stages.
