

LAPORAN EXCEL ANALYSIS

E-Commerce Sales Dataset — Day 2

Roadmap 7 Hari Data Analyst Portfolio — Dokumentasi Lengkap Langkah demi Langkah

By : Alya Shandy

1. Pendahuluan

Laporan ini mendokumentasikan proses analisis data pada dataset e-commerce sales yang sudah dibersihkan di Day 1 (cleaned_sales_data.xlsx, 3.933 baris). Analisis dilakukan sepenuhnya di Microsoft Excel menggunakan Pivot Table, formula (SUMIFS, COUNTIFS, IF, INDEX/MATCH), dan PivotChart, sesuai checklist Day 2 dalam roadmap Data Analyst portfolio 7 hari.

Berbeda dari Day 1, laporan ini disusun sebagai tutorial langkah demi langkah — setiap bagian menjelaskan CARA melakukan sesuatu di Excel (menu apa yang diklik, field apa yang di-drag, formula apa yang ditulis), bukan cuma menampilkan hasil akhirnya. Tujuannya supaya proses ini bisa diulang lagi atau diajarkan ke orang lain tanpa harus mengingat dari nol.

File kerja: Sales_Analysis.xlsx — dibuat dari Save As atas cleaned_sales_data.xlsx, dengan tambahan sheet pivot_tabels, Summary, Charts, dan Insights.

2. Ringkasan Eksekutif

Tabel 1 merangkum KPI utama hasil analisis.

Metrik	Nilai
Total Revenue (Completed)	\$252.227,72
Total Orders (Completed)	3.220
Average Order Value	\$78,33
Total Revenue (All Status)	\$306.842,22
% Revenue at Risk	17,8%

Tabel 1. KPI utama Sales Performance Summary

3. Tahapan Analisis (Tutorial)

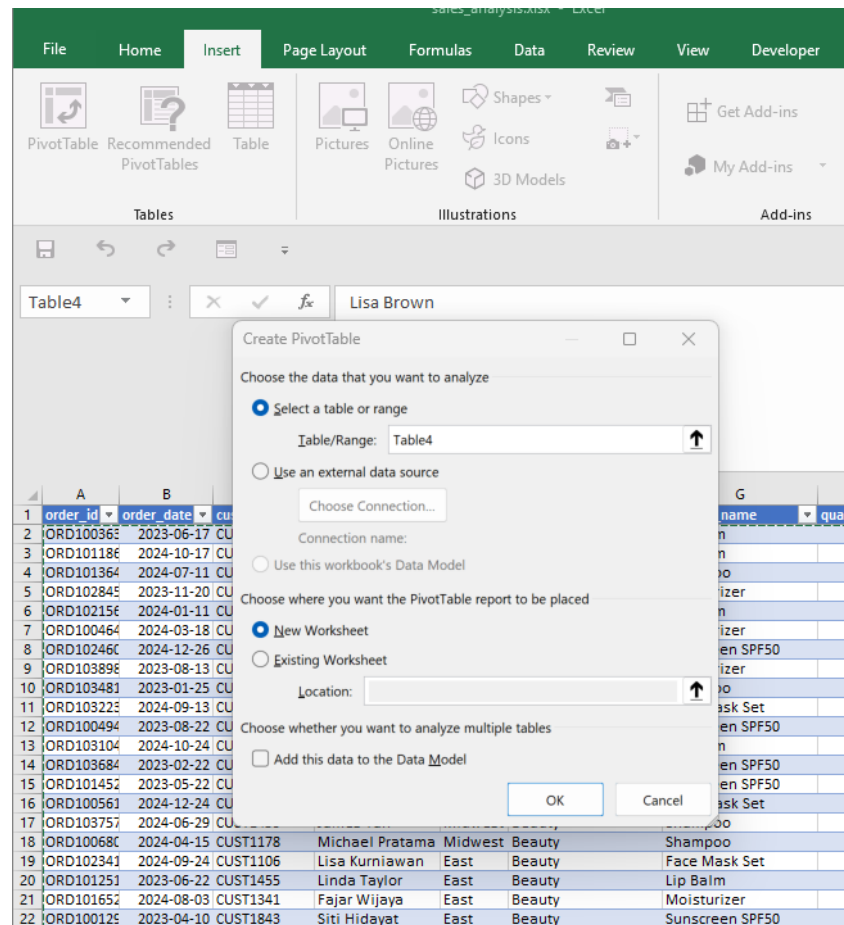

3.1 Membuat Pivot Table Pertama

Semua analisis Top Products, Top Categories, Monthly Revenue, Regional Performance, dan Customer Segments dibangun dari Pivot Table yang merujuk ke Table data di sheet cleaned_sales_data (bernama Table4).

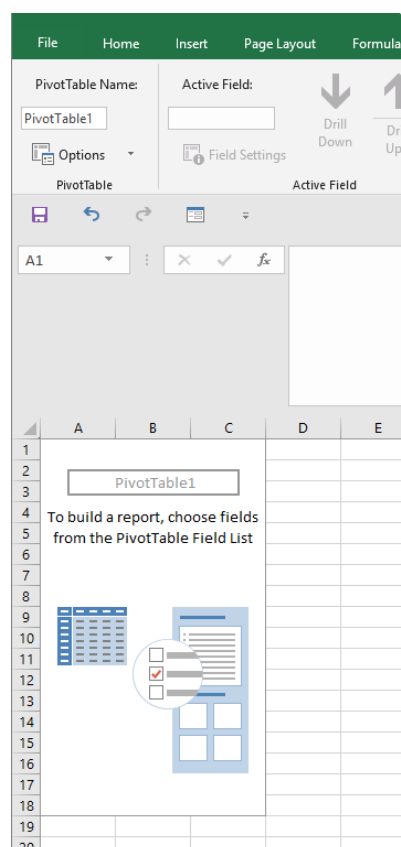

Cara membuatnya:

1. Klik satu cell di dalam Table data (sheet cleaned_sales_data).
2. Insert > PivotTable. Excel otomatis mendeteksi Table/Range (Table4).

3. Pilih New Worksheet (atau Existing Worksheet kalau mau ditaruh di sheet pivot_tabels yang sudah dibuat). Klik OK.

Gambar 1. Dialog Create PivotTable — sumber data Table4, ditempatkan di worksheet baru

Gambar 2. Pivot Table kosong sebelum field ditambahkan — field list muncul di panel kanan

4. Drag field yang diinginkan ke area Rows dan Values di panel PivotTable Fields sebelah kanan. Kombinasi field inilah yang membedakan tiap pivot table (dijelaskan per bagian di bawah).

3.2 Top 10 Products by Revenue

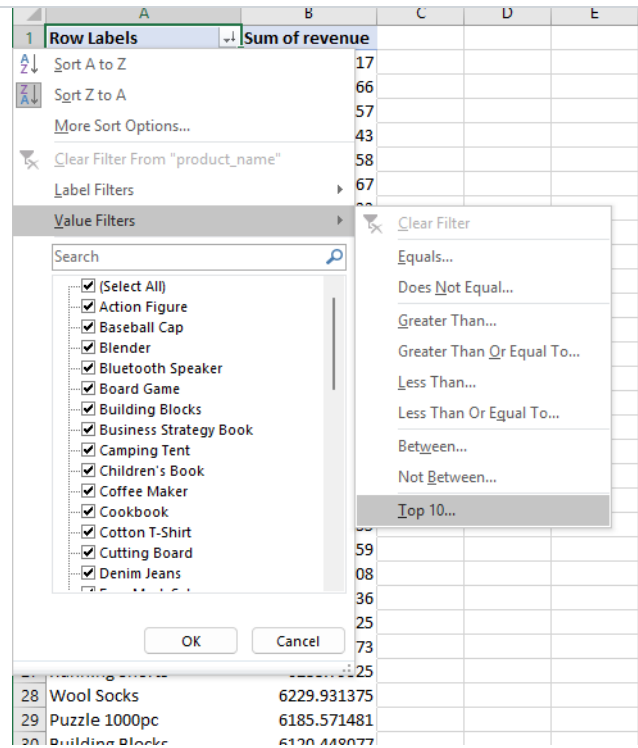

1. Drag product_name ke Rows, revenue ke Values (otomatis jadi Sum of revenue).

	A	B
1	Row Labels	Sum of revenue
2	Business Strategy Book	3326.066429
3	Cookbook	3695.323578
4	Self-Help Guide	3742.939464

45	Grand Total	306842.2194
46		

Gambar 3. Semua produk dengan Sum of revenue, sebelum difilter Top 10

2. Klik kanan salah satu angka revenue → Sort → Sort Largest to Smallest.

3. Klik dropdown filter pada Row Labels → Value Filters → Top 10...

Gambar 4. Menu Value Filters > Top 10 pada dropdown Row Labels

4. Pastikan pengaturan filter “Top 10 Items” berdasarkan Sum of revenue, klik OK.

Top 10 Products by Revenue	
Row Labels	Sum of revenue
Webcam	11684.87
Smartphone Case	11621.86
Power Bank	10494.45
Camping Tent	10146.63
USB-C Cable	9894.29
Non-Stick Pan	9605.93
Laptop Stand	9589.98
Resistance Band	9483.80
Bluetooth Speaker	9186.68
LED Desk Lamp	9069.24
Grand Total	100777.73

Gambar 5. Hasil akhir: Top 10 Products by Revenue, dipimpin Webcam (\$11.684,87)

3.3 Top Categories

Caranya sama seperti Top Products, tapi field Rows diganti category, dan tidak perlu filter Top 10 karena kategori cuma ada 7 total.

1. Buat pivot table baru: category ke Rows, revenue ke Values.
2. Sort Largest to Smallest.

Top Categories	
Row Labels	Sum of revenue
Electronics	79289.48
Home & Kitchen	61310.53
Sports & Outdoors	48657.00
Clothing	43285.06
Toys	31240.43
Beauty	23901.76
Books	19157.95
Grand Total	306842.22

Gambar 6. Top Categories — Electronics memimpin dengan \$79.289,48

3.4 Monthly Revenue Trend & Regional Performance

Monthly Revenue Trend

1. Buat pivot table baru: order_date ke Rows, revenue ke Values.
2. Excel otomatis menawarkan grouping tanggal (dialog Group) begitu order_date di-drag ke Rows. Pilih centang Months dan Years saja (uncheck Quarters kalau ada), supaya hasilnya langsung Year → Month tanpa layer Quarter di tengah.

Regional Performance

1. Buat pivot table baru: region ke Rows. Drag revenue ke Values (Sum), lalu drag order_id ke Values sekali lagi, ubah Value Field Settings-nya jadi Count — supaya dapat 2 metrik sekaligus: total revenue dan jumlah order per region.

Top 10 Products by Revenue		Top Categories

Gambar 8. Regional Performance dengan 2 kolom (Sum of revenue dan Count of order_id)

Insight yang langsung kelihatan dari sini: region East mendominasi drastis — \$229.821 dari \$306.842 total revenue (75%), dan 2.926 dari 3.933 order (74%). Region West cuma menyumbang \$3.367 (1%).

3.5 Customer Segments

Berbeda dari 4 pivot table sebelumnya, Customer Segments butuh 2 kolom bantu dulu di sheet data sebelum bisa dibuat pivot table-nya — karena “segmen” bukan kolom yang tersedia langsung di data mentah.

Langkah 1 — Hitung jumlah transaksi per customer (COUNTIFS)

Buat kolom baru customer_order_count di sheet cleaned_sales_data:

```
=COUNTIFS($C$2:$C$3934,[@[customer_id]])
```

	A	B	C	D	E	F	G	H	I	J	K	L	M	N

Gambar 9. Kolom customer_order_count — menghitung berapa kali tiap customer_id muncul di seluruh data

Langkah 2 — Klasifikasi New vs Repeat Customer (IF)

Buat kolom baru customer_segment, memakai hasil dari customer_order_count:

=IF([@[customer_order_count]]=1,"New Customer","Repeat Customer")

The screenshot shows an Excel spreadsheet with columns: Data, customer_id, customer_name, region, category, product_name, quantity, unit_price, order_status, payment_method, revenue, customer_order_count, and customer_segment. The formula bar displays: =IF([@[customer_order_count]]=1,"New Customer","Repeat Customer"). A filter is applied to the customer_order_count column, showing only rows where the count is 1. The customer_segment column is populated with 'New Customer' for these rows. A filter pane on the right shows 'New Customer' selected.

Data	customer_id	customer_name	region	category	product_name	quantity	unit_price	order_status	payment_method	revenue	customer_order_count	customer_segment

Gambar 12. Kolom customer_segment lengkap, difilter untuk menampilkan New Customer saja sebagai verifikasi

Langkah 3 — Buat Pivot Table Customer Segments

1. Buat pivot table baru: customer_segment ke Rows, revenue ke Values (Sum), dan order_id ke Values lagi (Count).

Customer Segments		
Row Labels	Sum of revenue	Count of Orders
New Customer	3427.88	48
Repeat Customer	303414.34	3885
Grand Total	306842.22	3933

Gambar 11. Hasil Customer Segments — Repeat Customer mendominasi 3.885 dari 3.933 order (98,8%)

3.6 Overview: Semua Pivot Table

Kelima pivot table (Top Products, Top Categories, Monthly Revenue Trend, Regional Performance, Customer Segments) disusun berdampingan di sheet pivot_tabels supaya mudah dibaca sebagai satu kesatuan dashboard mini.

Top 10 Products by Revenue		Top Categories	
Row Labels	Sum of revenue	Row Labels	Sum of revenue
Webcam	11684.87	Electronics	79289.48
Smartphone Case	11621.86	Home & Kitchen	61310.53
Power Bank	10494.45	Sports & Outdoors	48657.00
Camping Tent	10146.63	Clothing	43285.06
USB-C Cable	9894.29	Toys	31240.43
Non-Stick Pan	9605.93	Beauty	23901.76
Laptop Stand	9589.98	Books	19157.95
Resistance Bands	9483.80	Grand Total	306842.22
Bluetooth Speaker	9186.68		
LED Desk Lamp	9069.24		
Grand Total	100777.73		

Monthly Revenue Trend		Regional Performance	
Row Labels	Sum of revenue	Row Labels	Sum of revenue
2023	157565.78	East	229821.11
Jan	12576.92	Midwest	59797.74
Feb	13438.69	South	13856.29
Mar	16241.61	West	3367.08
Apr	12727.19	Grand Total	306842.22
May	14949.47		
Jun	9447.58

Oct	13284.38		
Nov	13760.26		
Dec	14036.19		
Grand Total	306842.22		

Customer Segments		
Row Labels	Sum of revenue	Count of Orders
New Customer	3427.88	48
Repeat Customer	303414.34	3885
Grand Total	306842.22	3933

Gambar 13. Susunan akhir kelima pivot table di sheet pivot_tabels

3.7 Sales Performance Summary (SUMIFS, COUNTIF)

KPI utama dihitung di sheet Summary, bukan sekadar dari Grand Total pivot table — supaya bisa difilter khusus order berstatus Completed (revenue yang benar-benar terealisasi, bukan termasuk Cancelled/Returned/Pending).

Total Revenue (Completed):
`=SUMIFS(Table4[revenue],Table4[order_status],"Completed")`

Total Orders (Completed):
`=COUNTIF(Table4[order_status],"Completed")`

Average Order Value:
`=D3/D4`

Total Revenue (All Status):

Gambar 14. Sales Performance Summary — Total Revenue Completed \$252.227,72, AOV \$78,33, Revenue at Risk 17,8%

3.8 Customer Lookup Tool (XLOOKUP vs INDEX/MATCH)

Kalau Excel-mu mendukung XLOOKUP (Microsoft 365 / Excel 2021+)

1. Ketik =XLOOKUP(lalu klik cell D12 (nilai yang dicari, yaitu customer_id yang diketik user).
2. Koma, lalu klik-drag/select seluruh kolom customer_id di Table (Table4[customer_id]) — ini "lookup_array", tempat XLOOKUP mencari kecocokan.
3. Koma, lalu klik-drag/select kolom yang mau ditampilkan hasilnya, misal customer_name (Table4[customer_name]) — ini "return_array".
4. Tutup kurung, Enter.

Bandingkan dengan versi region, segment, dan total orders — pola formulanya identik, tinggal ganti `return_array`-nya:

XLOOKUP secara default sudah exact match (tidak perlu argumen tambahan seperti angka 0 di MATCH), dan bisa mencari ke arah kiri maupun kanan tabel — lebih fleksibel dibanding VLOOKUP klasik.

Halaman 10

Karena XLOOKUP tidak tersedia, dipakai INDEX + MATCH yang hasilnya identik:

```
=INDEX(Table4[customer_name],MATCH($D$12,Table4[customer_id],0))
```

Cara baca formulanya: MATCH mencari POSISI baris di mana customer_id sama dengan D12, lalu INDEX mengambil nilai customer_name di posisi baris itu. Angka 0 di akhir MATCH wajib ditulis — artinya “cari yang PERSIS sama” (exact match), bukan pencarian mendekati. Tanpa itu, hasil pencarian bisa salah karena customer_id tidak terurut.

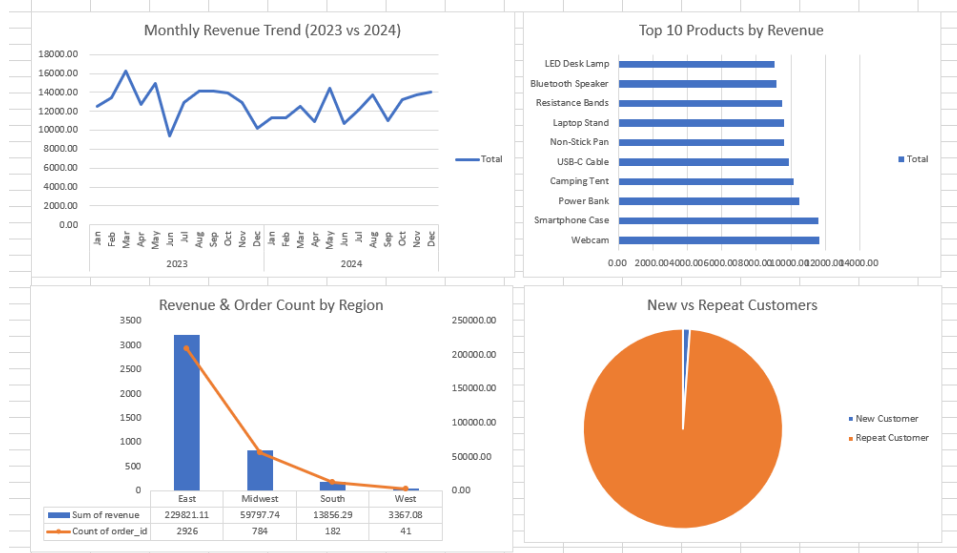

Sales Performance Summary	
Total Revenue (Completed)	\$252,227.72
Total Orders (Completed)	3220
Average Order Value	\$78.33
Total Revenue (All Status)	\$306,842.22
% Revenue at Risk	17.80%
Customer Lookup Tool	
Enter Customer ID	CUST1138
Customer Name	Fajar Anderson

Gambar 15. Customer Lookup Tool — masukkan customer_id (CUST1138), otomatis menampilkan nama customer (Fajar Anderson)

3.9 Charts (PivotChart)

Empat chart dibuat langsung dari pivot table memakai PivotChart (bukan Chart biasa), supaya otomatis update kalau data di pivot table berubah.

1. Klik di dalam pivot table sumber → Insert → PivotChart → pilih tipe chart (Line untuk tren waktu, Bar untuk ranking, Pie untuk proporsi).
2. Untuk chart Regional Performance yang menggabungkan 2 metrik beda skala (revenue dan jumlah order), dipakai Combo Chart: revenue sebagai Column di sumbu utama, Count of order_id sebagai Line di Secondary Axis — supaya dua-duanya kelihatan proporsional, tidak ada yang tertutup skala yang lain.
3. Field Buttons (dropdown filter yang otomatis nempel di pojok chart) disembunyikan lewat PivotChart Analyze > Field Buttons > Hide All, supaya tampilan lebih bersih untuk laporan.

Gambar 17. Dashboard 4 chart: Monthly Revenue Trend, Top 10 Products, Revenue & Order Count by Region, New vs Repeat Customers

26	Day 2	Excel Analysis	Tulis 5-10 business insights	Excel	
27	Day 2	Excel Analysis	Simpan sebagai Sales_Analysis.xlsx	Excel	

Gambar 16. Checklist Day 2 pada tahap formula dasar (SUMIFS, COUNTIFS, IF) sudah selesai, Charts dan Insights menyusul

4. Business Insights

Delapan insight berikut disusun berdasarkan seluruh angka dan pola yang ditemukan sepanjang analisis di atas.

1. Ketergantungan Ekstrem pada Region East

Region East menyumbang 75% dari total revenue (\$229.821 dari \$306.842) dan 74% dari total order (2.926 dari 3.933), sementara West cuma menyumbang 1% (\$3.367, 41 order). Ketimpangan seekstrem ini menunjukkan bisnis sangat bergantung pada satu wilayah — risiko besar kalau performa East menurun.

2. 17,8% Revenue Berisiko Tidak Terealisasi

Dari total revenue kotor \$306.842, hanya \$252.228 (82,2%) berasal dari order berstatus Completed. Sebanyak 17,8% (\$54.614) berasal dari order Cancelled, Returned, atau Pending — revenue yang belum tentu benar-benar terealisasi menjadi kas.

3. Basis Pelanggan Didominasi Repeat Customer, Akuisisi Baru Lemah

98,8% order (3.885 dari 3.933) berasal dari Repeat Customer, hanya 48 order dari New Customer. Ini menunjukkan retensi pelanggan sangat kuat, tapi di sisi lain menandakan akuisisi pelanggan baru yang sangat lemah dan perlu ditingkatkan.

4. Electronics Adalah Kategori dan Produk Dominan

Electronics adalah kategori dengan revenue tertinggi (\$79.289, 26% dari total), diikuti Home & Kitchen (\$61.311). Tiga dari lima produk terlaris (Webcam, Smartphone Case, Power Bank) juga berasal dari kategori Electronics — kategori ini jadi pendorong utama penjualan.

5. Books Jadi Kategori dengan Performa Terlemah

Books adalah kategori dengan revenue terendah (\$19.158), kurang dari seperempat revenue Electronics. Kategori ini berpotensi dievaluasi ulang dari sisi variasi produk atau strategi promosi.

6. Tidak Ada Pola Musiman yang Konsisten

Revenue bulanan berfluktuasi tanpa pola musiman yang jelas — puncak di Maret 2023 (\$16.242), lalu turun ke titik terendah di Juni 2023 (\$9.448). Ketidakstabilan ini menunjukkan revenue lebih dipengaruhi faktor acak/operasional dibanding tren musiman.

7. Revenue Tahunan Sedikit Menurun, Bukan Tumbuh

Total revenue turun tipis dari \$157.566 (2023) menjadi \$149.276 (2024), penurunan sekitar 5,3% year-over-year. Meski kecil, ini tetap tren negatif yang perlu diperhatikan, bukan pertumbuhan.

8. AOV Tergolong Rendah, Peluang Bundling/Cross-Sell

Average Order Value hanya \$78,33 dari 3.220 order Completed, konsisten dengan pola quantity yang mayoritas cuma 1 unit per order. Ada peluang menaikkan AOV lewat strategi bundling atau cross-selling produk pelengkap.

5. Ringkasan Checklist Day 2

Task	Status	Keterangan
Hitung Total Revenue	Selesai	SUMIFS, filter order_status = Completed
Hitung Total Orders	Selesai	COUNTIF, filter order_status = Completed
Hitung Average Order Value	Selesai	Total Revenue ÷ Total Orders
Cari Top Products	Selesai	Pivot Table + filter Top 10
Cari Top Categories	Selesai	Pivot Table, 7 kategori
Buat Monthly Revenue	Selesai	Pivot Table, grouping Year + Month
Buat Regional Performance	Selesai	Pivot Table + Secondary Axis chart
Buat Customer Segments	Selesai	Helper column COUNTIFS + IF, lalu Pivot Table
Pakai Pivot Table	Selesai	5 pivot table dipakai total
Pakai XLOOKUP / INDEX-MATCH	Selesai	Diganti INDEX/MATCH — versi Excel tidak mendukung XLOOKUP
Pakai SUMIFS	Selesai	Total Revenue (Completed)
Pakai COUNTIFS	Selesai	customer_order_count
Pakai IF	Selesai	customer_segment
Buat charts	Selesai	4 PivotChart di sheet Charts
Tulis 5-10 business insights	Selesai	8 insight di sheet Insights
Simpan sebagai Sales_Analysis.xlsx	Selesai	3.933 baris data bersih

Tabel 2. Status seluruh task Day 2 Excel Analysis

6. Kesimpulan

Analisis Day 2 menghasilkan Sales_Analysis.xlsx berisi 5 pivot table, 4 chart interaktif, KPI summary dengan formula SUMIFS/COUNTIF, Customer Lookup Tool dengan INDEX/MATCH, dan 8 business insight yang didukung angka konkret. Seluruh proses dibangun di atas dataset bersih 3.933 baris dari Day 1, sehingga angka yang dilaporkan konsisten dengan tahap-tahap sebelumnya.

Temuan paling signifikan: ketergantungan ekstrem pada region East (75% revenue), potensi kehilangan 17,8% revenue akibat order yang tidak Completed, dan akuisisi pelanggan baru yang sangat lemah (cuma 1,2% dari total order). Tiga poin ini jadi kandidat kuat untuk dibahas lebih dalam di Day 6 (Business Case Study).

File Sales_Analysis.xlsx ini menjadi input untuk Day 3 (SQL queries), Day 4 (Python EDA), dan Day 5 (Tableau dashboard) — khususnya angka-angka KPI dan insight di atas akan dipakai sebagai pembanding/validasi silang di tahap-tahap tersebut.
